

Traffi

FOR HANDS. FOR LIFE.

WINTER PRODUCT RANGE

2025/2026

BEATING THE WINTER CHILL

OUR GLOVES DON'T JUST PROTECT AGAINST WORKPLACE HAZARDS – THEY'RE BUILT TO HANDLE THE COLD TOO.

As the temperature drops, you need hand protection that keeps you warm, maintains grip and doesn't hold you back.

That's exactly what our winter range delivers: **comfort, control and protection** that you can rely on, helping us to achieve our mission to zero workplace hand injuries.

“

THE TG5070 IS A VERY GOOD GLOVE WHICH GIVES YOU FANTASTIC GRIP AND IS EXTREMELY COMFORTABLE WHEN PICKING AND ALSO KEEPS YOUR HANDS NICE AND WARM WITHOUT THE NEED FOR ANY ADDITIONAL LINERS. SUITABLE IN ALL TEMPERATURE CLIMATES ON SITE.

TAY JEFFRIES, BRAKES

WHAT TO CONSIDER WHEN CHOOSING YOUR WINTER SAFETY GLOVES

BREATHABILITY

Gloves that aren't breathable will trap heat and sweat inside, thereby leading to damp gloves. When gloves are wet inside, heat loss is far higher. Breathable gloves allow the sweat to escape, preventing the moisture from accumulating and therefore keeping your hands warmer.

WATERPROOF

Cold, wet hands can result in a reduction in overall body temperature. Wearing waterproof gloves will prevent water from getting inside your gloves in the first place, and keep your hands drier and warmer for longer.

INSULATION

When temperatures are low, our body heat is particularly valuable. To retain the heat in your hands, you should be wearing high quality winter hand protection with an insulating layer to protect your fingertips, as this is often the first place to lose warmth.

DEXTERITY

Dexterity in winter gloves is hard, but not impossible, to come by. If you cannot successfully carry out your tasks with the dexterity of the gloves you are wearing, you are very likely to remove them, and as we know, 70% of hand injuries occur after gloves have been removed.

PREVENT WINTER HAND INJURIES

Cold weather can quickly reduce grip, numb fingers and slow reaction times, which raises the risk of workplace injuries and lost workdays.

THE EN511 TESTS THREE KEY PERFORMANCE AREAS:

- **Convective Cold Resistance (0-4)**
How well gloves insulate against cold air.
- **Contact Cold Resistance (0-4)**
How well gloves protect when touching cold surfaces.
- **Water Penetration (0-1)**
Whether they remain dry after 30 minutes in water

Independently tested to EN511:2006 standard, our gloves provide protection in cold, wet, and hazardous conditions, helping workers to stay safe, whilst limiting the risk of workplace injuries.

5X

AS MANY RECEPTORS FOR COLD THAN FOR WARM TEMPERATURES CONTAINED IN THE HUMAN SKIN.¹

44%

MORE MISTAKES WERE MADE WHEN TEMPERATURES WERE LOWER THAN AT OPTIMAL ROOM TEMPERATURE.²

AT VERY LOW TEMPERATURES, YOUR FEET & HANDS FEEL COLD BEFORE OTHER PARTS OF YOUR BODY.³

25%

WATER CARRIES HEAT AWAY FROM THE BODY 25 TIMES FASTER THAN AIR BECAUSE OF ITS DENSITY. THAT'S WHY IT'S REALLY IMPORTANT TO TRY TO MINIMISE SWEATING AS MUCH AS POSSIBLE.⁴
